1. Open Kaggle and jump to the you profile section under account section create new api token.

2. Upload the kaggle.json file on google colab

In [8]:

```
!mkdir -p ~/.kaggle
!cp kaggle.json ~/.kaggle/
```

3. Whatever dataset you want to use just go there in right side click on three dot option popup Copied API command click that. And paste that

In [9]:

```
! kaggle datasets download -d wobotintelligence/face-mask-detection-dataset
```

```
Warning: Your Kaggle API key is readable by other users on this system! To fix this, you
can run 'chmod 600 /root/.kaggle/kaggle.json'
Downloading face-mask-detection-dataset.zip to /content
100% 2.49G/2.50G [01:08<00:00, 26.6MB/s]
100% 2.50G/2.50G [01:08<00:00, 39.2MB/s]
```

4. Only problem is to the download file is in zip format so we run the some code to unzip this particular file.

In [10]:

```
import zipfile
zip_ref = zipfile.ZipFile("face-mask-detection-dataset.zip","r")
zip_ref.extractall("/content")
zip_ref.close()
```
